TO  
HER MAJESTY'S JUSTICES OF THE PEACE  
FOR THE  
COUNTY OF DURHAM,  
IN  
GENERAL QUARTER SESSIONS  
ASSEMBLED.

.....  
THE COMMITTEE OF VISITORS HAVE TO REPORT,

THAT the accommodation for male patients is at present sufficient, which it would not have been but for the late additional building.

There are at present 203 male patients in the Asylum. The Female Wards are, however, very much crowded, and the number of patients in them is much greater than was originally contemplated. They were built to hold 150, and there are now 174.

The general management of the Asylum has been extremely kind, and great attention has been paid to the comfort of the patients.

Additions, not, however, more than required by the increase of number, have been made to the furniture, and the engravings and decorations—many of them given by benevolent friends—have increased the appearance of comfort in the Wards.

The conduct of the attendants has in general been good ; but as it is of great importance to retain efficient servants, it was thought advisable to raise their wages at the rate of one pound a year during their stay for the period of five years. Where, however, attendants were charged with having treated patients with severity, the Visitors made strict inquiry, and directed that when the accusations were proved, the offenders should be instantly dismissed and punished. We regret to have to say that two patients have lately committed suicide. In the first no blame attached to any one ; in the second, the attendants had perhaps not used sufficient precaution, and certainly were to blame in not giving immediate information to Dr. Smith that the patient was missing.

The reservoir in which this patient drowned himself, was fenced round, with the paling high enough but not strong enough to prevent a person determined on the act of self-destruction from breaking into it. We have ordered it to be strengthened.

A late Act directs that notice in all cases of deaths at the Asylum must be sent to the Coroner, and has given him the power to hold an inquest whenever the circumstances seem to him suspicious enough to justify it.

The consequence may be to increase very much the frequency of Inquests at the Asylum, as previously to the Act notice was only sent when the Superintendent or Visitors deemed that there might be ground to suspect that the death of a patient resulted from his own act or that of some other person, and the suspicion may probably be entertained more frequently by the Coroner.

The Visitors regret the alteration in the law, as while they feel that the fullest inquiry should always be made in cases of sudden death at the Asylum, and that there should be no disposition on the part of the authorities to conceal anything from the public, yet the frequency of Inquests is much to be deprecated.

The inquiry is not likely, in fact, to elicit any information which the authorities of the Institution would not possess without it, nor suggest remedial measures which they would not themselves discover and adopt. Deaths must necessarily be frequent at an Asylum from the nature of the distemper and condition of the patients when sent there, and the frequency of Inquests in such cases would cause suspicion instead of allaying it, as much of the evidence must be obtained from lunatic patients, and would often be exaggerated and sometimes be entirely delusive.

As regards the lunatics themselves, the Inquests create an excitement very prejudicial to their state of mind, and to the good order of the Establishment.

The Visitors would therefore earnestly hope that the Coroner will not deem it necessary to hold Inquests except in cases where the facts create a suspicion of ill-treatment or of suicide, cases which we trust will not be frequent.

No. resident 1st January, 1863....203.174.377

Being an increase of twenty-five men and ten women on the previous year. The average number resident has been 378.

The admissions have been more numerous this year than last by seventeen men and three women.

The recoveries have been greater this year than usual, bearing the satisfactory proportion of 52.6 per cent. on the admissions.

The patient marked as escaped was allowed one month's leave of absence to visit a near relative, but absconded, and has, it is believed, gone to live with his parents in London.

The deaths have been also rather above the average, being 11.1 per cent. on the number of patients under treatment. Inquests were held by the Coroner in eight cases. Two were deaths by suicide; one by hanging, and one by drowning. Three deaths occurred during the night; two from heart disease, and one from convulsions. In one case death was consequent on severe burns; in another there was suspicion of foul play on the part of an attendant; and in another the Medical Officer was unable to certify the cause of death, which turned out to be disease of the brain.

Two deaths occurred in patients who were on leave of absence. They had very considerably recovered from their mental disease, but were in bad bodily condition; the one a female labouring under epilepsy, and the other a male under phthisis.

The new workshops have been opened during the past year, and have fulfilled the great expectations formed. Classes for the amusement and instruction of both patients and attendants have been opened during the year, and will, it is trusted, prove serviceable in relieving the tedium of residence in the Asylum, in enabling patients, when recovered, to combat more successfully with the

world on their re-admission into it ; and, in cultivating and increasing the intelligence of the attendants, be the means of leading them to form a higher estimate of their duties.

(Signed)

ROWLAND BURDON, CHAIRMAN.

W. E. SURTEES,		

THE REPORT  
OF THE  
MEDICAL SUPERINTENDENT  
TO THE  
COMMITTEE OF VISITING JUSTICES.

---

GENTLEMEN,

I HAVE the honour to lay before you the Fourth Medical Report of the Durham County Asylum.

The Asylum has now been opened 5 years, during which period 840 patients, 450 men and 390 women, have been admitted, and 463 have been discharged.

The Recoveries have been 278 in number, the greater proportion being women. 54 have been discharged Relieved or Not Improved, and 131 have died.

The per centages of both Recoveries and Deaths are satisfactory, 33 per cent, calculated on the admissions, having recovered, and 9.5 per cent, calculated on the daily number resident, have died. The per centage of recoveries in particular has been satisfactory, as during the eighteen months following the opening of the Asylum 250 patients labouring under Chronic forms of the disease were received from various Asylums. Were this number deducted from the admissions, the per centage of recoveries would be much higher, viz., 47. It will be seen, on reference to Table I., that the annual average of patients resident has rapidly increased, the average annual increase being 58, the number of men being very slightly in excess of the women. This, together with the fact that 10 per cent more women than men have recovered, accounts for the disproportion between the sexes now resident.

Since the 31st of December, 1861, on which date there were 178 men and 164 women in the House, there have been admitted 99 men and 74 women, total 173, making a total of 277 men and 233 women under treatment during the year 1862. During the same period 74 men, 64 women, total 138, have been discharged or died, leaving 203 men and 174 women, total 377, in the Asylum on the 31st December, 1862.

Though 99 of the patients admitted were deemed incurable on reception, the age, the physical condition, but especially the short duration of the disease in the remainder, were favourable to recovery. It is with pleasure I mention this, as in former reports I had to complain of the great injury done to patients by not sending them to the Asylum during an early stage of their complaint.

The Recoveries, as stated before, have been more numerous this year than formerly, 46.5 per cent men, 60.8 per cent women, total 52.6, having been discharged cured.

The man enumerated as escaped was on leave of absence, and as he was not sent back at the proper time was returned "escaped."

The Deaths, with 3 exceptions, were all from natural causes, as may be seen on reference to Table XIII. The three exceptional cases were, two deaths from suicide, one by hanging, and another by drowning, and one from Pleuro-Pneumonia, occasioned no doubt by fracture of the ribs. As a partial statement only of this case has appeared in the prints, I trust I shall be excused in giving a detailed statement of the case.

"J. H. was admitted from the Gateshead Union on the 2nd of August, 1861, labouring under an advanced stage of General Paralysis. The Medical Certificate on which he was admitted contained the following:—"Spends the whole of the night in dressing and undressing himself and wandering about his wards, disturbing and fighting with the other occupants." During his residence in the Asylum he continued to bear out this character: being morbidly reckless as to his personal safety and noisy and violent during the night.—Up to Monday the 6th of January (some 56 hours prior to his death) H. appeared to be in his usual health. On that night he became very unwell with what was supposed to be an aggravation of his former symptoms. Next morning, however, it was discovered that he was labouring under Pleuro-Pneumonia, with fractured ribs, next day (Wednesday) he was apparently much improved, but towards night he became rapidly worse, and died on Thursday morning.

"On the discovery of the fractures on Tuesday morning I examined into the case—one of the attendants admitted having, on Saturday, the 4th January, knelt on H. to prevent himself being injured by the patient. The attendant denied that he had used violence, and seemed unaware that he had inflicted any injury.

"In accordance with the instructions of the Visiting Justices I forwarded information to the Coroner, who did not hold the inquest till Monday the 13th. After examining the body and various witnesses, the Jury pronounced the cause of death to have been Pneumonia.

“The evidence went to show that a struggle, as before mentioned, took place between the attendant and H.—that several patients were present when it took place—that an attendant was in the adjoining room with the communicating door open, and that so little disturbance was made that this attendant did not know that anything unusual was going on. It did not appear that any great violence had been used, nor did H., although seen by the Medical Assistant after the struggle, complain of being hurt, or appear to be so at the time.

“H. was labouring under General Paralysis (which in all probability would have caused his death within a few months) a disease accompanied by degeneration of various tissues in the body, and affecting, more or less, every system and function. It is therefore not unnatural to suppose that the bony structure partook of this degeneration, and gave way to pressure, which would not have been felt by a healthy subject. The Visiting Justices next day enquired thoroughly into the case, and have since directed the discharge of the attendant, and have, through me, cautioned the others against kneeling on any patient.”—[*Extract from a letter to the Gateshead Board of Guardians, Feb. 3, 1862.*]

I brought the subject, as stated in the above letter, before the Visitors at their meeting the next day, when they examined various witnesses, both attendants and patients, and came to the conclusion that there was no cause of complaint against the attendant, except that mentioned above. Immediately on the conclusion of the inquest I forwarded to the Commissioners in Lunacy notice of the death of J. H., giving as the cause of death the verdict of the Coroner's jury, and stating that it was the verdict. The law required that I should have forwarded it within 48 hours after the death, but this I was not in a position to do, not having made a *post mortem* examination: I forwarded the certificate the first post after the investigation. About a fortnight after these events, a patient informed me that he had seen the attendant, before accused, strike H. He also brought evidence of cruelty in other instances, which, though they could not be received in a court of law, justified me in discharging the attendant, which I immediately did.

Some three months after, two Commissioners in Lunacy, Mr. Lutwidge and Mr. Wilks, visited the Asylum, and, on their asking some questions about the class of attendants procurable in this district, I informed them of the above case, when they carefully examined all the books, including the Case Book and the *Post Mortem* Book, having reference to H.'s death. They did not, as is generally done, make an entry in the Visitors' Book, but sent me in a week after

a Report which I was requested to insert in the usual Report Book. Having been delayed six days, this Report may surely be considered to embody the well matured opinion of the two experienced Commissioners in Lunacy. It is as follows:—"J. H. admitted 2nd August, 1861, in an advanced stage of General Paralysis. Died January last, prior to which several ribs (were) found to be broken.—Inquest held by the Deputy-Coroner. The P. M. examination disclosed the facts of the recent fractures of 16 or 17 ribs, and the rupture of the bladder. The 8th rib on the left side had punctured the pleura. The Deputy-Coroner did not examine any patient, although Dr. Smith suggested to him to do so. He is stated to have summed up against M., the attendant immediately in charge of the patient, as having by violence ruptured the bladder. The jury by their verdict acquitted M. of manslaughter, and found the cause of death to have been Pneumonia. About a fortnight subsequently it transpired that M. had had a personal altercation with H. in the Airing Court,\* when they fell together, M. uppermost, and that the latter, as it is believed, to extricate himself from the patient's grasp, knelt upon his chest. It further transpired that M. had shortly before ill-used other patients, and knocked down one with a broomstick. He was therefore summarily dismissed, and at the same time another attendant in the same ward, who had neglected to report what he had witnessed of the occurrence in the Airing Court, was required to resign." The Commissioners in Lunacy conclude their Report with the following:—"The general result of our visit was to satisfy us that Dr. Smith continues to evince every desire actively to promote the comfort and wellbeing of the patients under his charge."

Such are the *facts* of a case on which the Commissioners in Lunacy founded a charge against me! The case was brought before the Stockton Bench of Magistrates and dismissed.

Notwithstanding, the Institution has, I trust, made progress during the past year. The Clothing and Dietary of the patients have been improved—furniture has been added to the Wards—the means of amusement have been increased—the library has been made more extensive use of; and classes for instruction have been opened by the medical officers.

The Chapel services, consisting of prayers and a sermon every Sunday afternoon, and prayers every Thursday, have been well attended during the year. Many among the patients are exceedingly attentive in taking their part in the service, while over all the very

---

\* It was in a room in No. 2 Ward that this occurred.

fact of their being in a Chapel devoted to Divine Service appears to exercise a salutary influence. The Choir, which meets for practice once a week under the direction of the organist of Sedgefield Church, Mr Hipkiss, and is composed of attendants with some few patients, adds greatly to the beauty and solemnity of the service by the careful rendering of the psalms and chants.

As will be seen, on reference to the Tables, the work of the patients, both male and female, has been considerable. From 60 to 90 of the former have been constantly engaged on the farm or garden: from 30 to 50 have been detained in the House for various reasons, as sickness, incapacity, &c., and the remainder have been occupied as tailors, shoemakers, joiners, blacksmiths, upholsterers, &c. The new workroom for females has been of great service—in it some 80 women daily assemble for work; and the discipline enforced there shews its effect in the Wards, fewer patients being found crouching on the floors, or destroying their clothes.

For the second time within the last two years death has removed from the midst of us an efficient officer. The late Chief Attendant, Thomas Cotcher, a most faithful and valuable servant and friend, died of Phthisis in February. His death was hastened by his constant attendance on Dr. W. Cannon, who died of Diptheria after a residence here of only six weeks. Both were excellent and efficient officers, kind to and beloved by the patients, and both died in the performance of their duties.

With some few exceptions, which have been brought under your notice, the Attendants have performed their most arduous duties well.

To Dr. McLeod, the Assistant Medical Officer, I am much obliged for his able and energetic aid. To Miss Duce, the Matron, and Mr. Macklin, the Steward, my thanks are likewise due for their valuable assistance.

Trusting that during the year 1863 I shall merit the kindness which you have shown me during the past five years,

I have the honour to be, Gentlemen,

Your obedient Servant,

ROBERT SMITH.
